PROFESSIONAL SUMMARY

Passionate Electrical Engineering student specializing in **digital IC design, RTL development,** and **embedded systems.** Proven expertise in IoT solutions, PCB design, and hardware optimization. Aiming to leverage technical skills and hands-on project experience to contribute to semiconductor innovation. Strong collaborator with a track record of delivering end-to-end projects on time.

INTERNSHIPS

Subject Matter Expert – IoT | Wirecraft Labs | Nov 2024 – Jan 2025

- Developed an **RFID-based attendance system** with API integration, reducing manual data entry time by 40%.
- Designed **PCB layouts** for IoT devices, including a line-follower car, using EAGLE and Proteus.
- Authored a lab manual adopted for training 50+ schools, covering IoT design and implementation.

Student Intern | Electro-India Industries | Jun 2024 – Jul 2024

- Built a **12V auto-cutoff PCB** for weighing machines, enhancing safety and reducing power waste by 25%.
- Automated weight logging via UID input, storing data in CSV format on SD cards.

Student Intern | Apsis Solutions Pvt. Ltd. | Nov 2023 – Dec 2023

- Designed RTL architectures for **traffic light controllers** and **RISC-V-based ALU**, optimizing logic gates for 15% faster processing.
- Simulated and validated designs using Xilinx Vivado, achieving 100% compliance with specifications.

PROJECTS

Booth's Multiplier Implementation

- Tools & Technologies:** Verilog, Xilinx Vivado, microwind 3.9, DSCH
- Designed and implemented Booth's multiplier using CMOS technology at a 120 nm scale to optimize binary multiplication in digital circuits.
- Focused on improving computational efficiency and reducing hardware resource utilization.
- Validated the design through transistor-level simulations and extensive testing to ensure high performance and accuracy.

RISC-V (RTL Design)

- Tools:** Xilinx Vivado
- Designed and implemented a RISC-V based ALU to enhance computational efficiency.
- Developed and simulated RTL code to optimize performance and validate functionality.

7400 NAND Gate IC Design

Tools & Technologies: Microwind 3.9, DSCH, SPICE

- Designed and implemented a CMOS-based 2-input NAND gate IC using Microwind 3.9 at a 120 nm technology node.
- Designed transistor-level schematics optimized for low power and minimal delay.
- Conducted DC and transient analysis to validate switching characteristics and performance.
- Ensured compliance with λ -based VLSI design rules for fabrication feasibility.

CANSAT (Atmospheric Data Collector)

Tools & Technologies: Raspberry Pi, various sensors (temperature, pressure, altitude), GPS, RF Communication, PCB Design

- Developed a CANSAT for atmospheric data collection and transmission for participation in the American Astronomical Society Competition.
- Integrated sensors for real-time monitoring and programmed data acquisition with wireless communication.

TECHNICAL EXPERTISE

- Digital Design:** RTL (Verilog/VHDL), RISC-V Architecture, Booth's Multiplier
- Tools:** Xilinx Vivado, EAGLE, Proteus, MATLAB, STM32CubeIDE, Keil uVision
- Protocols:** UART, SPI, I2C, CAN Bus
- Programming:** Embedded C, Python
- Hardware:** PCB Design, FPGA, Arduino, ESP32, STM32

EDUCATION

- Government College of Engineering Karad**..... Nov 2022 – Jun 2026
B.Tech (Electronics & Telecommunication Engineering) CGPA: **9.21/10.0**
- Adarsh Uccha Madhyamik Vidyamandir**..... Jul 2021 – Jun 2022
HSC Percentage: **86.83%**
- New Adarsh Madhyamik Vidyamandir**..... Jun 2019 – Jun 2020
SSC Percentage: **97.40%**

SKILLS

- Collaboration:** Team Leadership, Cross-functional Coordination
- Problem-Solving:** Root Cause Analysis, Debugging, Performance Optimization
- Documentation:** Technical Writing, Lab Manuals, Project Reports

ACHIEVEMENTS

- Letter of Recommendation** from Wirecraft Labs for contributions to IoT education and experiment design.
- Top 0.1% in SSC** (State Rank) with 97.4%, reflecting academic excellence.
